

THE PROMISE AND CHALLENGES OF CONVERGENT RESEARCH

Yannis C. Yortsos
USC Viterbi School of
Engineering

Informed by:

Dean of Engineering- 2005-present

NRC CERC Report Contributor- 2015-2017

NRC SBE Report Contributor- 2017

NAE Grand Challenges Scholars Program 2009- present

NAE Council- 2017-present

ASEE Diversity Initiative- 20015-present

NSF I-Corps Node Los Angeles PI- 2015-present

ERC Planning Grant Workshop
October 1 , 2019 Alexandria, VA

WHY ENGINEERING

Enabling Discipline of Our Times

1. Exponentially Growing
2. Convergent

Human Nature does not Change Exponentially Fast!

LEVERAGING *PHENOMENA** FOR *USEFUL PURPOSES***

- **PHYSICAL** (e.g. Photoelectric Effect)
- **CHEMICAL** (e.g. Catalysis)
- ◎ **GEOLOGICAL** (e.g. Groundwater)
- ◉ **BIOLOGICAL** (e.g. Bioengineering)
- ***SOCIAL-BEHAVIORAL***

Increasing complexity

Paraphrased from
Brian Arthur (2008)

*And systems, devices and tools- and combinations thereof
**Including the *discovering of new phenomena*

1. Electrification ○
2. Automobile ○●
3. Airplane ○●
4. Water Supply and Distribution ○●
5. Electronic ○
6. Radio and Television
7. Agricultural Mechanization ○●
8. Computers ○
9. Telephone ○
10. Air Conditioning and Refrigeration ○●
11. Highways ○
12. Spacecraft ○●
13. Internet ○
14. Imaging ○
15. Household Appliances ○●
16. Health Technologies ○
17. Petroleum and Petrochemical Technologies ●
18. Laser and Fiber Optics ○
19. Nuclear Technologies ○●
20. High-performance Materials ○●

Physical	○
Chemical	●
Biological	○

LEVERAGING *PHENOMENA** FOR *USEFUL PURPOSES***

- **PHYSICAL** (e.g. Photoelectric Effect)
- **CHEMICAL** (e.g. Catalysis)
- ◎ **GEOLOGICAL** (e.g. Groundwater)
- **BIOLOGICAL** (e.g. Bioengineering)
- ***SOCIAL-BEHAVIORAL***

Increasing complexity

Convergence

Paraphrased from
Brian Arthur (2008)

*And systems, devices and tools- and combinations thereof
**Including the *discovering of new phenomena*

WHY CONVERGENCE?

Exponential Technology

*Era of Constant Accelerations**

**Friedman (2016)*

Materials, Energy, Knowledge: Only the latter has the property that the more it is consumed the more is created (not my remark)

EXPONENTIAL CHANGES
There are no longer steady states or even steady states in growth

Exponential, if the technology speed is proportional to it

$$\frac{\Delta A}{\Delta t} \approx \lambda A$$

Faster than exponential (*singularity*) if it is proportional to a higher power ($n > 1$)

$$\frac{\Delta A}{\Delta t} \approx \lambda A^n$$

LINEAR KINETICS: $A \rightarrow A$

$$\frac{\Delta A}{\Delta t} \approx \lambda A \Rightarrow A \approx A_0 \exp(\lambda t)$$

EXPONENTIAL INCREASE: **MOORE'S LAW!**

QUADRATIC KINETICS: $A + A \rightarrow 2A$

$$\frac{\Delta A}{\Delta t} \approx \lambda A^2 \Rightarrow A \propto \frac{1}{(t^* - t)}$$

SINGULARITY AT t^*
KURZWEIL'S CONJECTURE!

ENGINEERING + X

Where X is anything!

E.g. Media, Medicine, Entertainment, Biology, Education,...

Three pathways:

$E \Rightarrow \underline{X}$ (Engineering Empowers X)

$\underline{X} \Rightarrow E$ (X empowers Engineering)

$E \cup \underline{X}$ (Engineering and X comingle)

E and X can be vectors

E=>X

ENGINEERING EMPOWERS X

E makes X “smarter”; more “efficient”;
opens new dimensions, many disruptive.
The ubiquitous digitization of everything
(AI, ML, Analytics)
(Digital Technologies)

X => E
X EMPOWERS E

X-mimetic

Biomimetic: Nature's optimization through evolution

Perhaps other

EX

ENGINEERING AND X COMINGLE

E makes X “smarter”, more “efficient”

X: new phenomena/provide context, which create new E.

A “double helix” of E and X

Nanotechnology, Biotechnology, Cognitive, etc.

(Exponential Technologies)

Likely the subject of a CERC

NON-LINEAR: $nA \rightarrow B$

$$\frac{\Delta B}{\Delta t} \approx \lambda A^n \Rightarrow B \approx B_0 \exp(n\lambda t)$$

EXPONENTIAL INCREASE
WITH A DIFFERENT
EXPONENT

(A= INFORMATION
TECHNOLOGY; B=
BIOTECHNOLOGY?)

WHY GRAND CHALLENGES?

Powerful, Fast Evolving, Convergent Technology
Allows Us to Set Achievable Goals for all Humanity

*Choosing Goals is an Ethical Question
(when the technology is increasingly powerful)*

Make solar energy economical

Provide energy from fusion

Develop carbon sequestration methods

Manage the nitrogen cycle

Provide access to clean water

Restore and improve urban infrastructure

Advance health informatics

Engineer better medicines

Reverse-engineer the brain

Prevent nuclear terror

Secure cyberspace

Enhance virtual reality

Advance personalized learning

Engineer the tools of scientific discovery

**GRAND CHALLENGES
FOR ENGINEERING**

SUSTAINABILITY

Make Solar Energy Economical, Provide Energy from Fusion, Develop Carbon Sequestration Methods, Manage the Nitrogen Cycle, Provide Access to Clean Water

SECURITY

Secure Cyberspace, Prevent Nuclear Terror, Restore and Improve Urban Infrastructure

HEALTH

Engineer Better Medicines, Advance Health Informatics, Reverse Engineer the Brain

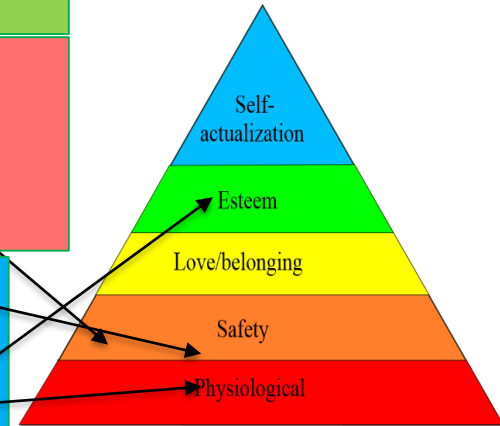

ENRICHING LIFE

Enhance Virtual Reality, Advance Personalized Learning, Engineer the Tools of Scientific Discovery

BEHAVIORAL AND SOCIETAL?

Social Phenomena (Through cyberphysical and data science)

Maslow's Hierarchy

Individual and family well-being

- Ensure healthy development for all youth
- Close the health gap
- Stop family violence
- Advance long and productive lives

Stronger social fabric

- Eradicate social isolation
- End homelessness
- Create social responses to a changing environment
- Harness technology for social good

Just society

- Promote smart decarceration
- Build financial capability for all
- Reduce extreme economic inequality
- Achieve equal opportunity and justice

CONVERGENCE CHALLENGES

“Culture wants to be enduring and prevailing”

from Antonio Damasio’s “The strange world of things” (2018)

1. Talent: students, faculty, staff- and environment to flourish

PEOPLE

2. Value: Continuously adding value to curriculum, programs

PROGRAMS

3. Thought Leadership: Research and discovery

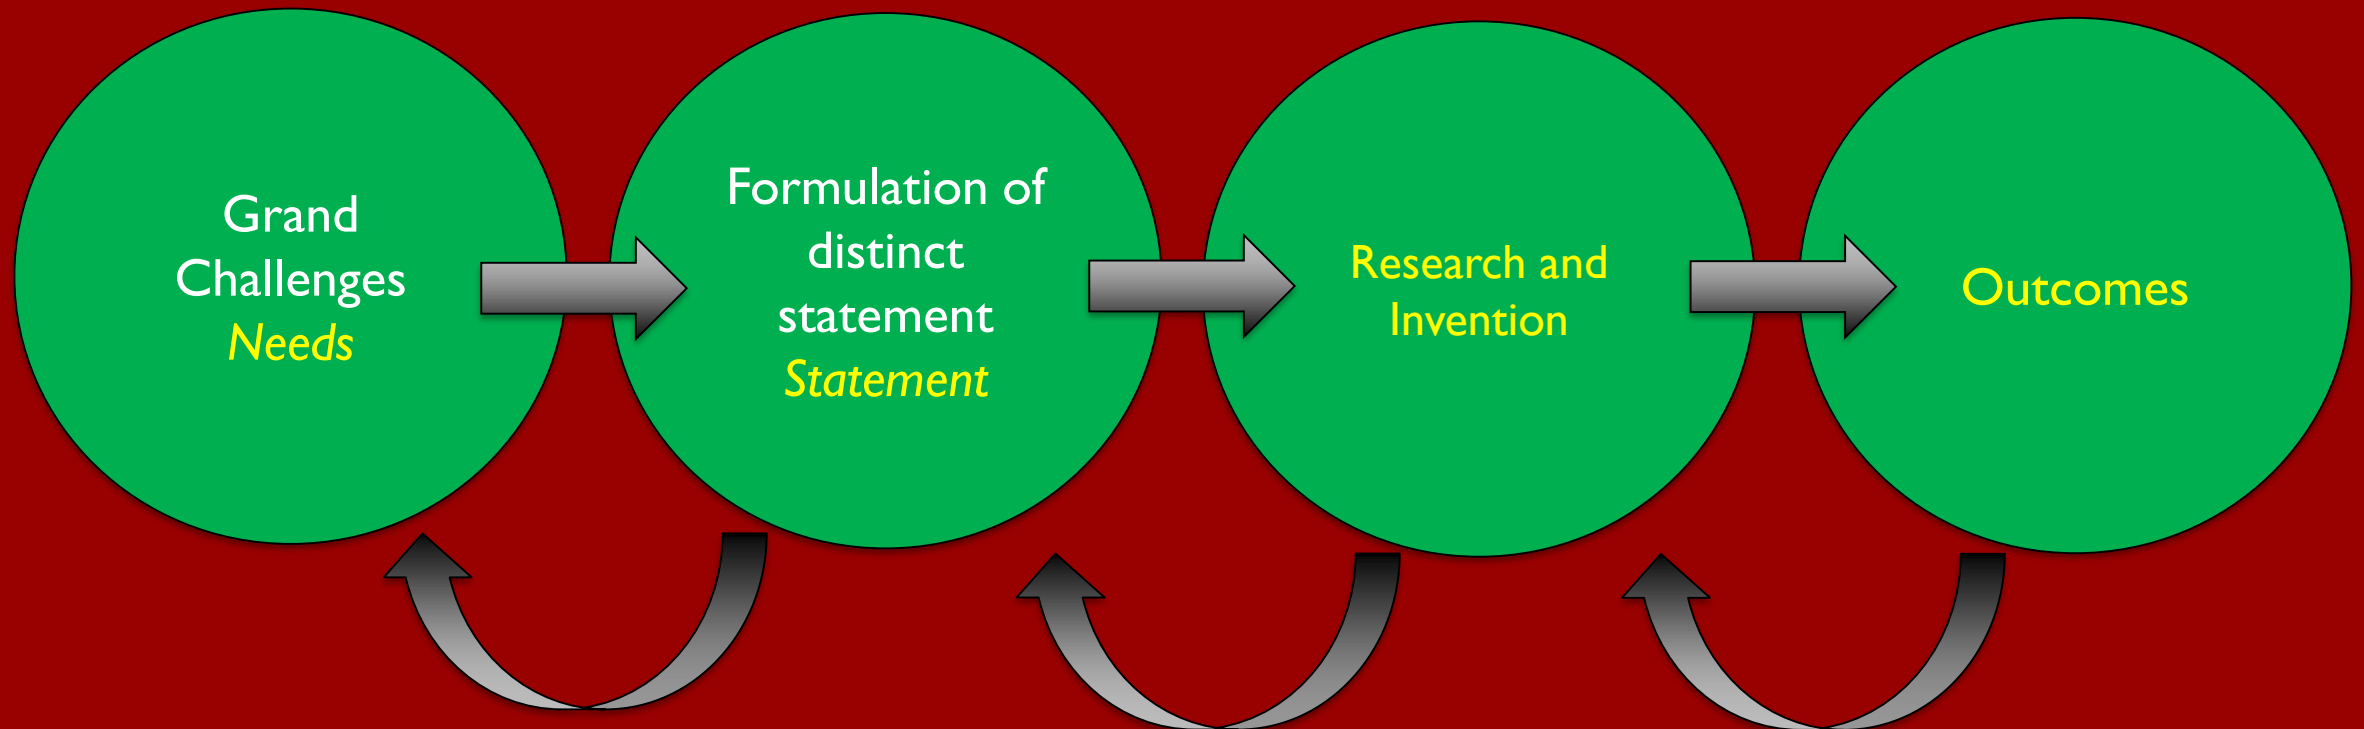

PAPERS

4. Impact: Impact on society and the economy (Innovation and Entrepreneurship)

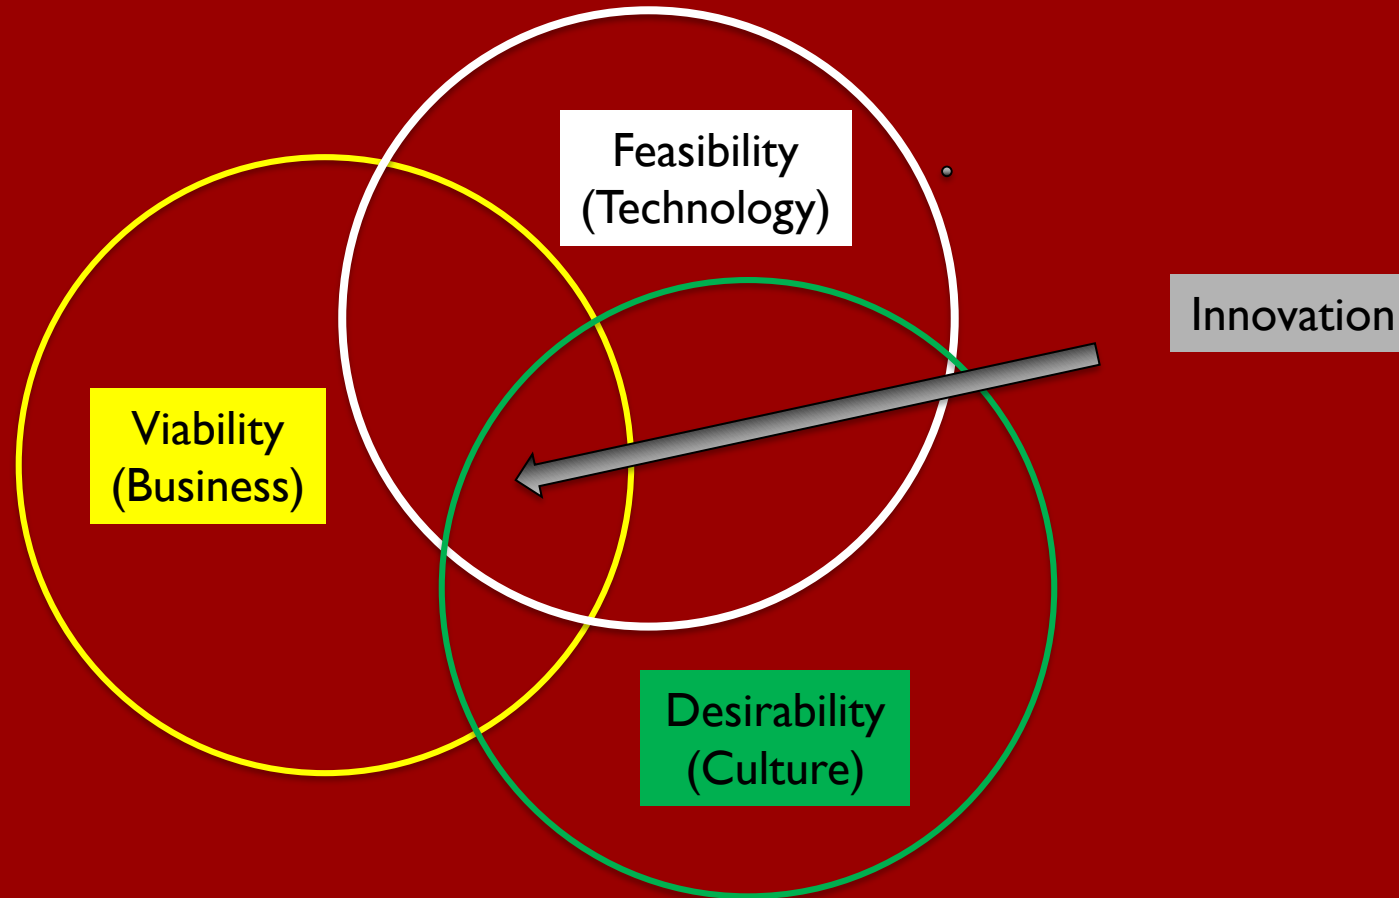

PRACTICES-PATENTS

Addressing the solution of Grand Challenge-like problems requires innovation and innovation methodologies

Adapted from Stanford's Biodesign

CHANGING THE CONVERSATION ABOUT ENGINEERING

*IN OUR EXPONENTIALLY CHANGING
WORLD*

What we do: Convergence

Who we are: Attributes

What we look like: Diversity, Equity, Inclusion

**THE EXPONENTIAL PACE OF TECHNOLOGY BRINGS CONSTANT DISRUPTION.
THIS REQUIRES AGILITY AND ADAPTABILITY – AND *NEW MINDSETS***

Keep closing the gap by
“Hugging the Exponential”!

MUST REINVENT OURSELVES EVERY YEAR

The challenge to changing culture:
-Values, goals, behavior, attitude, rewards and incentives
Requires:
-Champions, leadership, mindsets of growth

THE FIVE MINDSETS OF CHANGE TO THRIVE IN TODAY'S WORLD

- 1 HUG THE EXPONENTIAL**
Superb Technical Skills and Knowledge to Lead the Exponentially Changing Technology
- 2 ENGINEERING +: CHANGE THE CONVERSATION ABOUT ENGINEERING**
Engineering + X where X is anything (particularly, human-centric)
Who we are, what we do and what we look like.
- 3 INNOVATION IN THE BROADEST SENSE**
Innovation and Entrepreneurship, to help create the new markets,
the new jobs and to design the new self.
- 4 THE CULTURAL MIND**
Cultural Awareness (with culture broadly interpreted), to help thrive in
today's fast changing world.
- 5 HEROIC ENGINEERING**
Awareness of the Impact of Engineering to Society
(and the importance of technology ethics).

Competence

Character

TRUST: FOUR CORES OF CREDIBILITY*

1. Capabilities (talent, attitude, skills, knowledge, mindset)
2. Results (performance- past, current, anticipated)
3. Integrity (humility, courage, congruence)
4. Intent (motive, agenda, behavior)

Competence

Character

Trustworthiness: an increasingly demanded attribute of engineers and technologists

*From Covey, "The Speed of Trust"

Conceived in 2009 (USC, Duke, Olin):
Adopted by > 80 schools nationwide: Now an NAE signature program

Consistent with WEF report on added skills for the 21st century:
Creativity, Leadership, Perseverance
Consistent with the *Engineer of 2020*

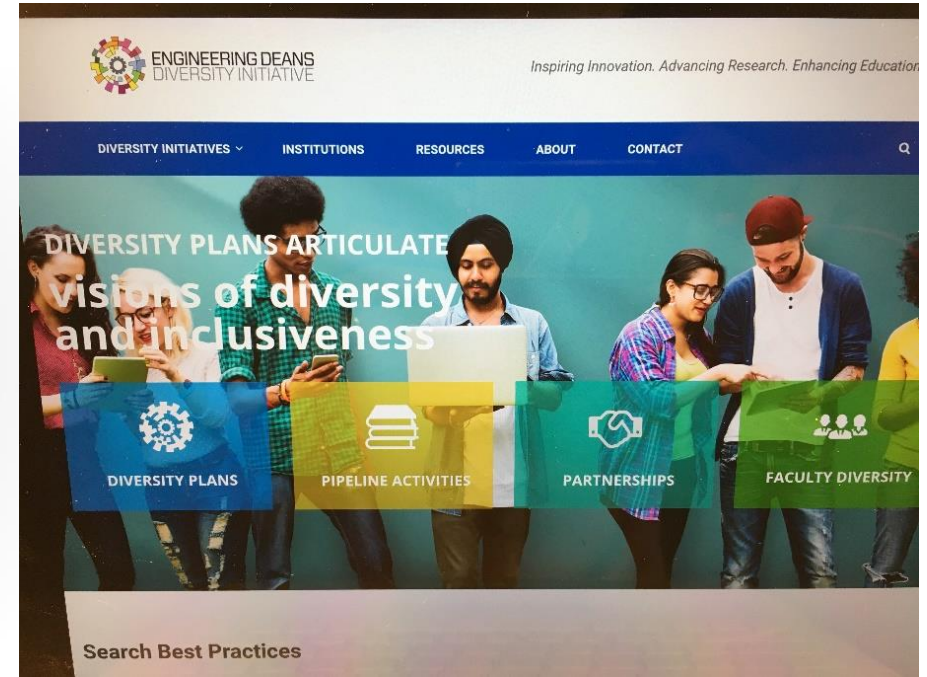

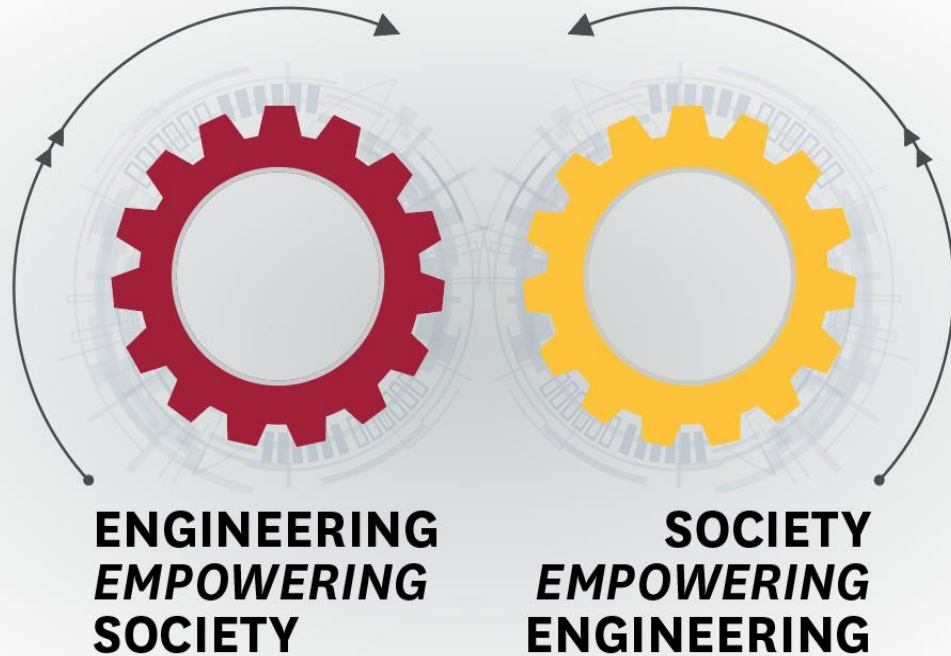

CULTIVATES FIVE MINDSETS

(and Trustworthiness)

- 1. Research/creative**
- 2. Multidisciplinary**
- 3. Entrepreneurial**
- 4. Cultural**
- 5. Society conscious**

**NATIONAL (ASEE) DIVERSITY AND INCLUSION INITIATIVE
(NOW SIGNED BY 230+ SCHOOLS NATIONALLY)**

“FROM STEAM ENGINE TO STEAM ENGINE*”: THE NEED FOR DEI

WALPORT (GGCS, LONDON 2019)

USEFUL LINKS PHENOMENA WITH LEVERAGING

- ETHICAL-LEGAL
- UNINTENDED CONSEQUENCES
- COMPLEXITY
- POLICY- LEGISLATION- REGULATION

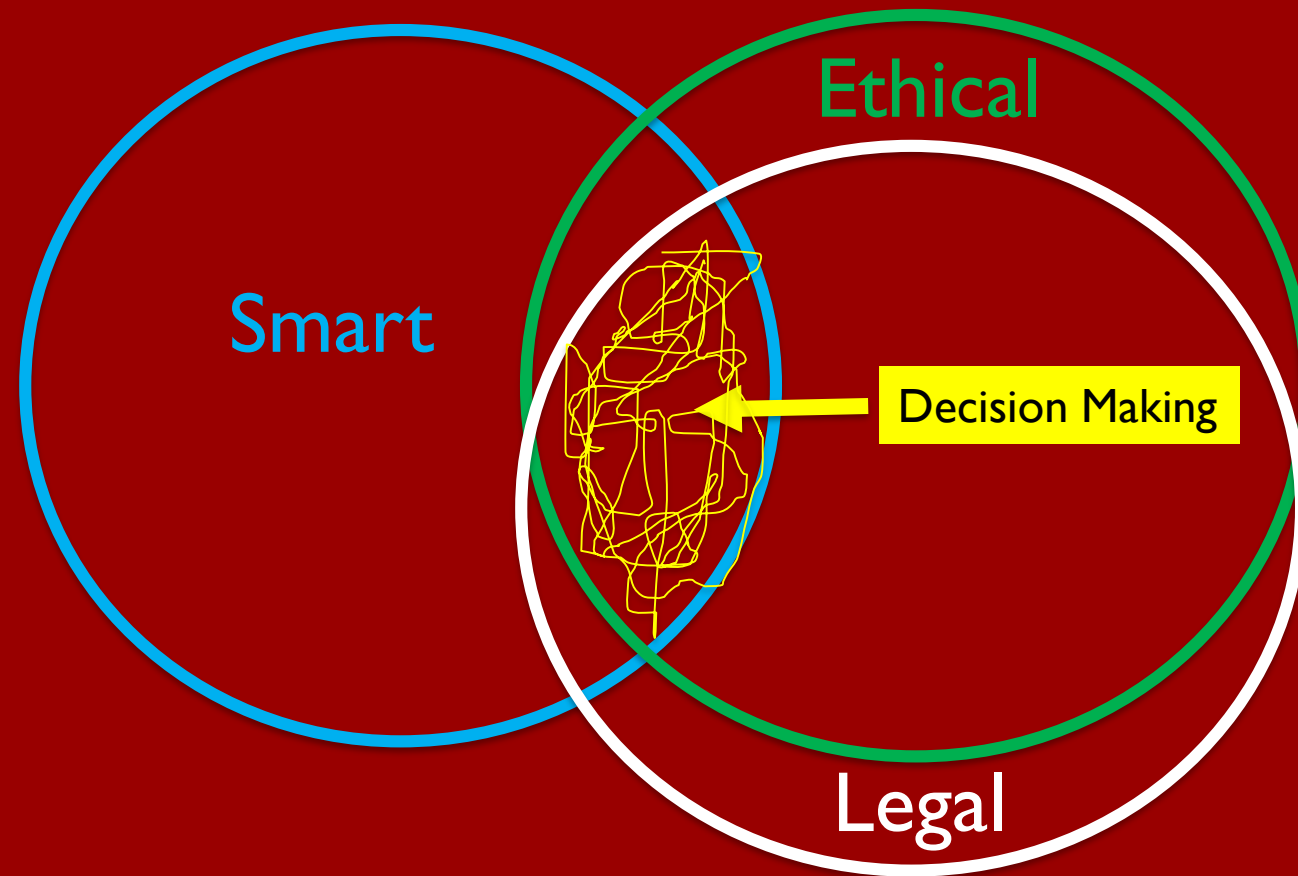

WHY ETHICS

LEVERAGING PHENOMENA
FOR ***USEFUL PURPOSES (GOALS)***

Goals Driven by Values

But, Unintended Consequences (increasingly powerful)

Policy- Legislation- Politics

Unintended consequences will always be there because of our complex, non-linear world.

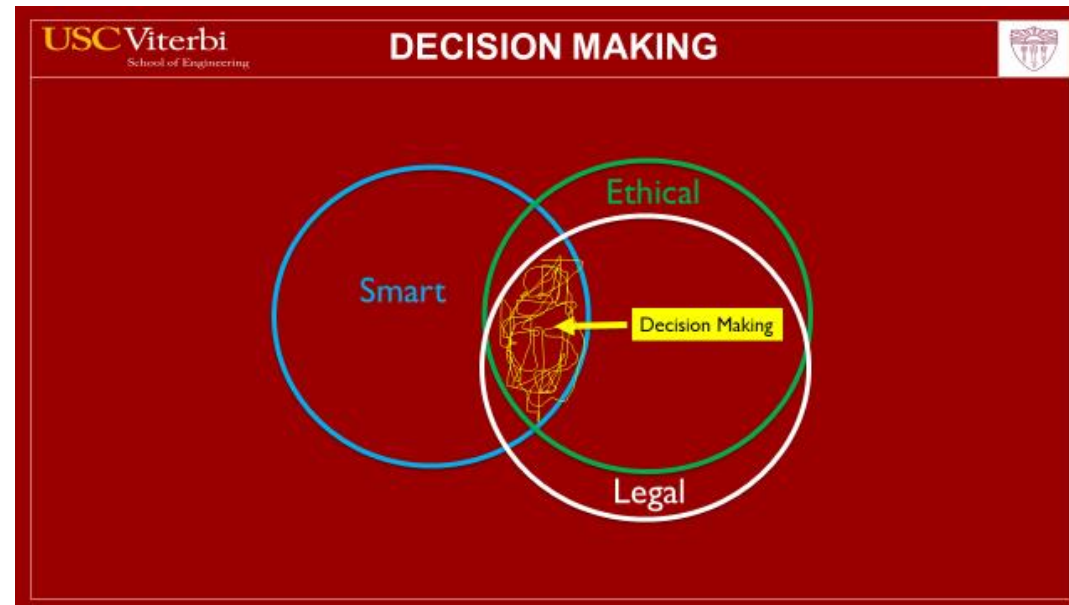

- › Synergy of humans with technology, e.g. Human Machine Interaction (HMI), Building Machine Interaction (BMI), Socially Assistive Robotics (SAR).
- › Autonomy and symbiosis of machines with humans
- › Automation impact on human labor; employment and income inequality issues
- › Personalized customization (from medicine to preferences and human desires) and the risk of the loss of privacy
- › Machine Learning and AI to model and leverage human and societal behavior, and to inform future action, inherently includes biases
- › Reverse engineering the brain probes truly fundamental aspects of what it means to be human- and so does the field of Synthetic Biology
- › These bring fundamental questions in what we value as society- from the individual to the collective- and how we educate our students

TRUST: FOUR CORES OF CREDIBILITY*

1. *Capabilities (talent, attitude, skills, knowledge, mindset)*
 2. *Results (performance- past, current, anticipated)*
 3. *Integrity (humility, courage, congruence)*
 4. *Intent (motive, agenda, behavior)*
- Competence
- Character

*From Covey, "The Speed of Trust"

1. Hug the Exponential
2. Engineering +
3. Innovation in the Broadest sense
4. The Cultural Mind
5. Heroic Engineering

Powerful and Convergent Technology Helps:

*Setting and Solving Humanity's Goals- and
Changing the Conversation about Engineering*

- Problems are inevitable
- All Problems are solvable

(From David Deutsch's book "The beginning of infinity")
