

Welcome! As you enter the room, please...

1. Plug in your headset (if available).
2. Familiarize yourself with the **top bar** on the screen
3. Make sure your **speakers and mic are enabled** (the icons on the top bar should be **highlighted in green**).
4. Run the **audio setup wizard** (this option is available from the “Meeting” menu on the left right of the screen).
5. Once you have run the wizard, “**raise your hand**” by clicking on the icon available on the top bar. This will indicate hosts you are ready to test your mic.
6. After testing your mic, **mute yourself** by clicking on the mic icon on the top bar (this will help to avoid background noise).

Note: Feel free to use the chat at any time!

Mechanics VCP Session 1

April 4, 2013

UNDERSTANDING STUDENT MOTIVATION AND ENGAGEMENT IN THE CLASSROOM

Agenda:

- (i) Mechanics VCP learning objectives**
- (ii) Objectives for today's session**
- (iii) Quick technology shakedown**
- (iv) Overview of the How Learning Works (HLW) framework**
- (v) Promoting a positive classroom climate**
- (vi) Structuring learning to mesh with student motivation**
- (vii) Foreshadowing: learning taxonomies (Session 2)**

Session 1 Learning Objectives

Ed

3

- **At the end of this session, participants will be able to:**
 - understand the goals of the overall Mechanics VCP experience
 - agree to the expectations of all participants
 - summarize the 7 How Learning Works principles
 - deconstruct how a classroom environment can promote or diminish learning
 - provide a classroom environment that encourages student motivation

Mechanics VCP Objectives

Ed

4

- **The Mechanics VCP represents an experiment in creating a mutually-supportive community of passionate mechanics educators who can share ideas, techniques, and wisdom to improve the undergraduate education enterprise**
- **At the end of the Mechanics VCP, participants will be able to:**
 - *Articulate* the key features of learning taxonomies and *describe* specific approaches/tools/strategies that target activities at different levels of the taxonomies
 - *Identify* their students' motivations and *deploy* research-based teaching strategies that successfully tap into those motivations
 - *Align* course objectives, assessments, and instructional strategies to promote learning
 - *Integrate* specific research-based, active learning strategies into their own classes
 - *Create* new learning activities for their students that use techniques known to promote learning
 - *Cultivate* a welcoming classroom environment, an awareness of student learning differences, and a respect for student intellectual/social/emotional development
 - *Understand* the expectations of funding agencies and education journals for quality, depth, and breadth of educational research proposals and papers

MVCP Participant Expectations

Ed

5

- **Mechanics VCP participants, including the hosts, will:**
 - *attend* each VCP session and actively contribute to the discussion
 - *read and reflect* on all assigned material
 - *set aside* the chaos of daily faculty life and *present* our best selves to the group
 - *interact* via the OpenAtrium portal in between VCP sessions as requested by the leaders
 - *engage* the material and the group with *energy* and *curiosity*, *respect* for each other and our ideas, and *patience* in the face of the possible (inevitable?) technology hurdles

Technology Shakedown

Ed

6

- **Let's start with audio settings** 
- **Now audience response functions...who can raise their hand?** 
- **Now the chat window...feel free to type a message (that's sent to the whole group!); private chats are possible too**
- **In a few minutes, a poll**
- **And then breakout rooms and the functionality therein**
 - **Exercise: ~4-5 people per breakout room, 5 minutes total to discuss the results of the poll we'll take**
 - **One participant set the timer to 5 minutes**
 - **Hosts insert message when 1 minute remains**
 - **Hosts go into some breakout rooms to listen in and answer any questions**

Outcomes of the VCP General Pre-Survey

Ed

7

- **This survey was given to ALL VCP participants (mechanics, thermo, others...)**
- **Generally, participants are interested in:**
 - active learning strategies
 - assessment techniques
 - identifying and articulating desired course outcomes
 - aligning objectives, activities (pedagogies), and assessment

Mechanics VCP Pre-Survey

10

In your career, how many times have you taught statics, dynamics, and/or strength of materials?

About how many students are typically in your class?

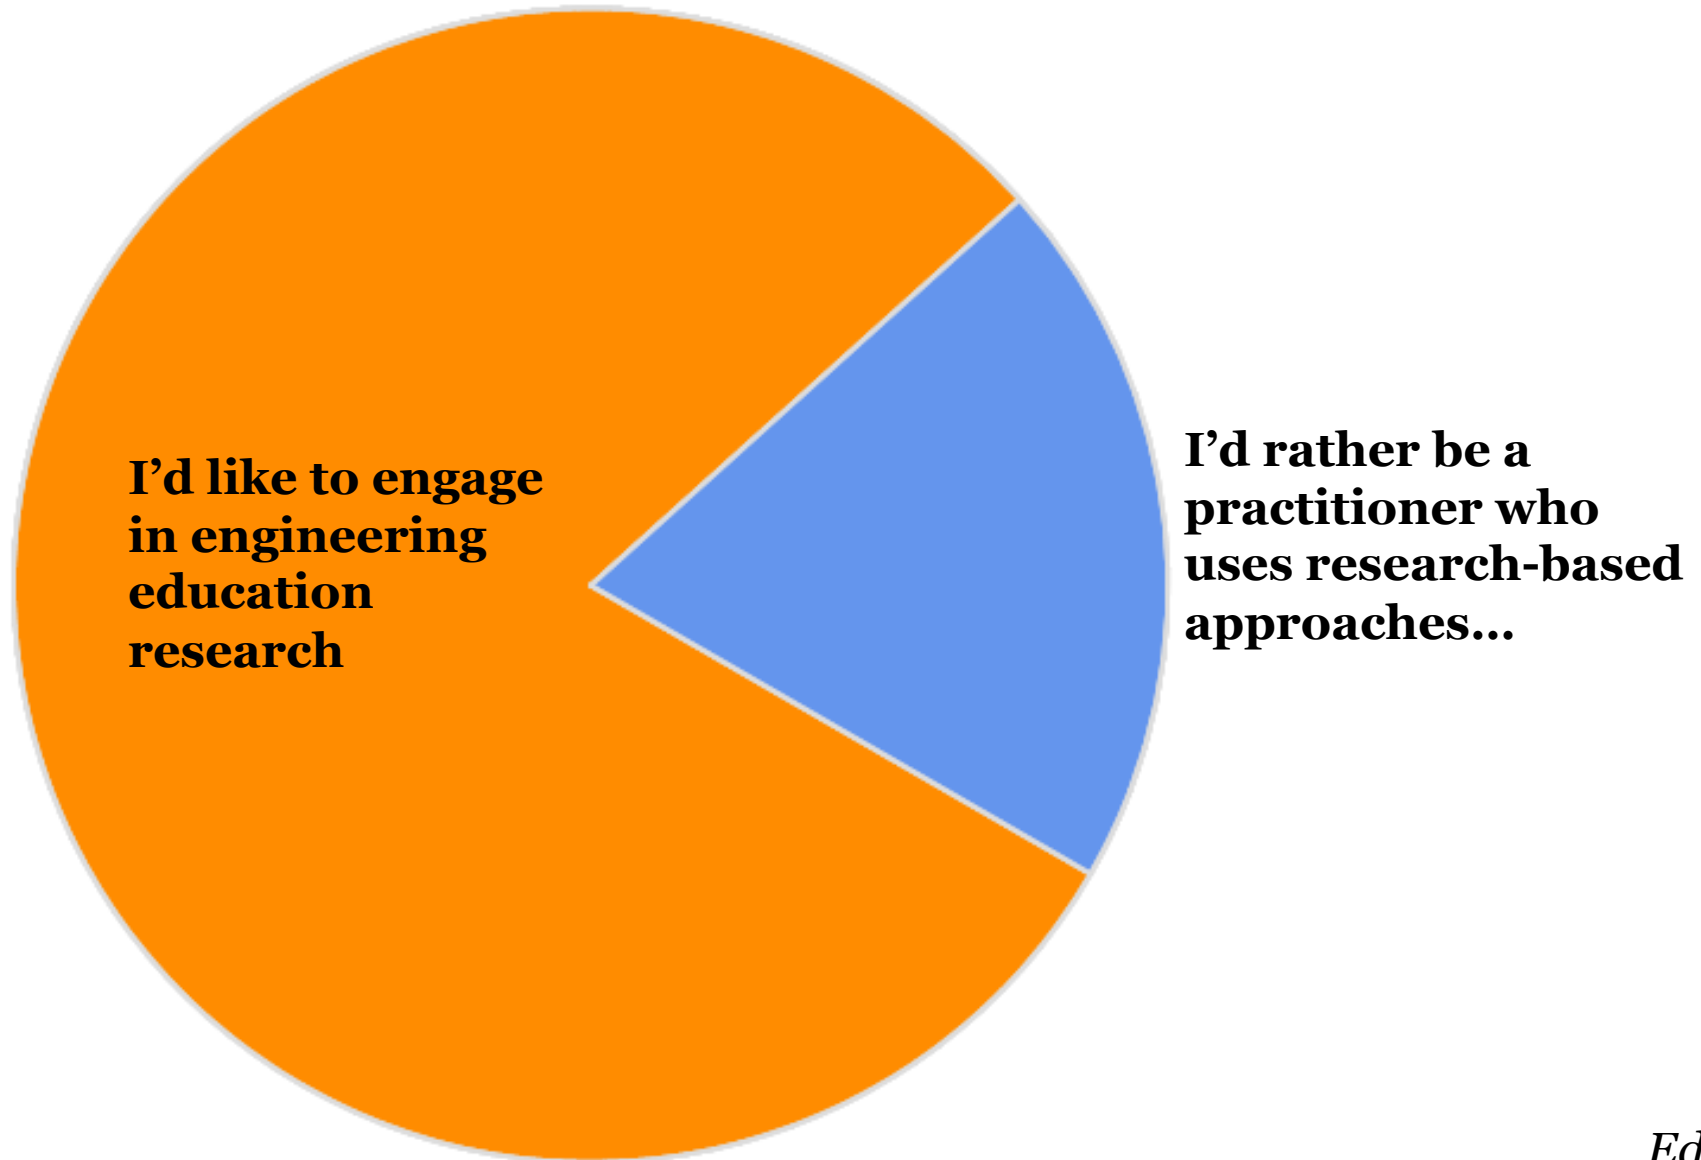

In your class in a given semester, how often do you:

We will do our best to cover topics of specific interest to you. Please rank the topics below in order from your highest interest (#1) to your lowest interest.

Are you interested in doing engineering education research? Or are you more interested in using research-based instructional approaches, without being an education researcher yourself?

How Learning Works*

Ed

14

- 1. Students' prior knowledge can help or hinder learning**
- 2. How students organize knowledge influences how they learn and apply what they know**
- 3. Students' motivation determines, directs, and sustains what they do to learn**
- 4. To develop mastery, students must acquire component skills, practice integrating them, and know when to apply what they have learned**
- 5. Goal-directed practice coupled with targeted feedback enhances the quality of student' learning**
- 6. Students' current level of development interacts with the social, emotional, and intellectual climate of the course to impact learning**
- 7. To become self-directed learners, students must learn to monitor and adjust their approaches to learning**

*Ambrose, Bridges, DiPietro, Lovett, and Norman, *How Learning Works* (2010)

How We Will Use HLW

Ed

15

- **The HLW framework is a very useful tool to characterize the specific actions students and instructors can take to promote learning**
- **We will use HLW to inspire some of what we do in this VCP**
- **You do NOT (!) need to purchase this book to participate in the VCP**
- **It is nonetheless a useful reference and we can certainly recommend it for your bookshelf**

Creating positive course climate

Brian

17

- **What do you do on the first day? Click on all that apply**
 - Ice breaker with students
 - Go over syllabus
 - Begin with course content
 - Give a concept inventory

- **Breakout rooms: discuss and list things that you do on the first day**
 - 2nd person on the breakout list takes notes
 - 3rd person will report out

Some examples...

Brian

18

- **Early surveys to get to know students**
- **Expectations listed (similar to what we did on the syllabus)**
- **Try to be positive on the syllabus – no bold punitive statements, discussions of how difficult the class is, etc,**

Development, course climate, and learning

Brian

19

- Students' current level of **development** interacts with the **social, emotional, and intellectual climate** of the course to impact learning
- Pedagogy should consider holistic student development
 - Intellectual and social identity development
- Course climate issues also important
 - Stereotypes
 - Tone
 - Faculty-student and student-student interactions
 - Course content

Inclusivity, Low-Threat Environment

Brian

20

- **Social and emotional gains are larger than intellectual gains in college**
- **“Student-centered teaching requires us to teach students, not content”**
- **Inclusivity: avoid micro-inequities and tokenism. Use diversity of examples.**

Breakout Rooms

Brian

21

- **What do you do that you think helps to promote a positive course climate?**
- **In breakout rooms, come up with a list of things you do to encourage a positive climate**
- **3rd person on breakout room list is recorder (take notes on the notepad)**
- **4th person on list will report out**

Instructional strategies from the research

Brian

22

- **Make uncertainty safe**
- **Examine your assumptions about students**
- **Model inclusive language, behavior, and attitudes**
- **Establish and reinforce ground rules for interaction**
- **Use the syllabus and first day of class to establish the course climate**

Chickering Model of Student Development

Brian

23

- **Developing competence**
 - Intellectual, physical, interpersonal
- **Managing emotions (express appropriately)**
- **Developing autonomy (final goal is interdependence)**
- **Establishing identity**
- **Freeing interpersonal relationships**
- **Developing purpose (“who am I going to be?)**
- **Developing integrity (self interest vs social responsibility)**

Perry's Model of Intellectual Development

Brian

24

- **Duality – right and wrong answers, knowledge is absolute**
- **Multiplicity – matter of opinion, evaluation is purely subjective**
- **Relativism – opinions are not all equal, hone your intellectual and critical skills**
- **Commitment – choose a theory or approach over another**

Increasing Student Motivation*

Brian

25

- **Choose knowledge and skills that are worth learning**
- **Pitch the tasks you set for your students just beyond their base capability but well within their reach & expect them to succeed**
- **Make the classroom a safe place to take the risks involved in learning by the way you treat students' attempts to learn**
- **Encourage the building of a community of learners in your class, where everyone supports others' attempt to learn**
- **Give the learners some choices in what or the way they learn**
- **Be a good model of a mastery-oriented learner**
- **Accept the fact that yours is not the only or even the most important venue in which your students function**

Svinicki, M. D., (2005). *Student goal orientation, motivation, and learning*. (Idea Paper #41). Manhattan, KS, The IDEA Center.

Breakout Rooms

Brian

26

- **What have you done in your class that you think motivates students?**
- **In breakout rooms, come up with a list of things you do to motivate students**
- **1st person on breakout room list is recorder (take notes on the whiteboard)**
- **4th person on list will report out**

Learning Taxonomies

Ed

27

- **It is helpful to consider many of the HLW principles, as a whole, in a unified expression of what we ask students to do and what actions we take to promote learning**
- **One way to view this set of actions is via a *learning taxonomy***
- **The best-known is Bloom's taxonomy (updated in 2001), which we will talk about in depth in Session 2 (April 11)**
- **For now, simply consider...**

Taxonomies

Ed

28

- **Principle 4: to develop mastery, students must *acquire* component skills, practice *integrating* them, and *know when* to apply what they have learned**
 - “acquire” component skills
 - “integrate” them
 - “know” when to apply them
- **These verbs describe different levels of cognitive engagement, as we will see next time**

For Session 2 (April 11, 2013)

29

- **Update your user profile (with a picture!)**
- **Review articles in Atrium folder**
 - Creating class climate (Session 1 Reading folder)
 - Motivation (Session 1 Reading folder)
 - Bloom's Taxonomy (Session 2 Reading folder)
- **Connect with our community on the blog**
- **Using Bloom's verbs, upload examples of:**
 - Course learning objectives
 - Sample lesson objectives
 - Upload these to the folder:
Mechanics VCP Session 2>Sample Objectives (Using Bloom Verbs)
